DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 3. Claims 1-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Katooka et al (US 5,831,240).

As to claims 1, 2, 10, and 17, Katooka et al disclose a welding apparatus and method to assemble the end panel to the base of the welding apparatus comprising the <u>end panel (100)</u> having at least one snap with an opening, and <u>the base (300)</u> having at least one ramp (312) formed thereon that is generally in alignment with at least one snap (figures 3a-d).

Application/Control Number: 10/065,571

Art Unit: 1725

Katooka et al fail to teach the ramp on the end panel. Instead, Katooka teaches the ramp on the base. However, it would have been obvious to one of ordinary skill in the art at the time applicant's invention was made to modify the ramp on either the base or end panel, since that would have been a design choice.

As to claims 3-9, 11-16, and 18-23, Katooka et al disclose at least one snap is U-shape (figure 3), at least one snap comprises a pair of snaps formed at the end of the base and the at least one ramp comprises a pair of ramps formed in the receptacle area of the end panel (figures 3). The receptacle area comprises angled internal lateral surfaces and the base includes angled external sides adapted to interfit in close proximity. At least one ramp formed within the receptacle area of the end panel has an upper surface inclined upwardly in the direction away from the base and ending in a rear vertical wall (figure 3).

Inquiry

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Len Tran whose telephone number is (571) 272-1184. The examiner can normally be reached on M-F, 8:30 - 5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tom Dunn can be reached on (571) 272-1171. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
